

TITAN PMR

A PROPOSAL TO WAHID MUHAMMAD

The Titan Content Operating System v1

A repeatable machine for pharmacy-industry storytelling.
Q4 2026 and beyond.

AUTHOR

Cam Moorcroft
CMotionDesign

DATE

17 August 2026

STATUS

v1 · Draft

The machine, not the message

We have been growing, but the machine is manual, the data was misleading us, and reach per post is diluting even while total engagement holds.

The problem

Titan's LinkedIn page has scaled from 3,370 followers in mid-2024 to 6,128 in mid-2026, an 82 percent rise. Impressions, reach and engagement all followed. The picture looks healthy. Underneath, three things are quietly broken.

First, the engagement rate the dashboard has been showing us is roughly a third of the real number, a mapping bug in the analytics pipeline. Second, roughly half the videos we shipped in the last year performed at or below noise, dragging the video median down without contributing anything. Third, the shapes that reliably earn the most reach on LinkedIn are used in a small minority of posts, so the platform's own bias is under-monetised. We have been running a strong content operation with the instrument panel wired wrong.

The results

An operating system, not another strategy revision. Content flows through seven stages, each with a named owner, a tool, and a leverage claim. Killing the 79 below-par video types lifts the video median by 27 percent at zero cost. Making question-opener hooks the house standard adds a 1.6x free reach uplift. Extending unused hero footage (Asif, Akbar, Malia, Pritee, already shot, already paid for) ships four full campaigns before Christmas. A subagent stack in Cam's voice removes the last-mile bottleneck. Wahid gets a quarterly quantified review cycle, not a monthly narrative.

+27%

Video median lift from killing below-par types (zero cost)

1.63x

Reach uplift from question-opener hook (LinkedIn)

4

Hero campaigns unshipped from footage already paid for

7

Stage operating pipeline, each with named owner

The budget

Modest. A part-time creative producer (2 to 3 days per week), studio kit reset for portal shoots, and agent infrastructure. Specific figures TBD with Cam.

The timeline

Q4 2026 stands the operating system up. Q1 2027 runs the first full cycle end to end.

02

Social media goals

Mapped to Wahid's business goals. SMART where the instrumentation supports it, flagged where it does not.

Four goals, four instrumented answers

Awareness

Grow total reach across LinkedIn, TikTok, Instagram and podcast (once launched) by 40 percent versus the same period last year. Grow LinkedIn followers to 7,500 by end of Q1 2027 (from 6,128 today). Promote TikTok to a stated primary channel with its own follower baseline set by end of September.

Engagement

Lift median real engagement rate from 6.87 percent toward 9 percent on LinkedIn. This uses the *corrected* number (see Data Integrity, Section 5). The top-of-page pattern — named-operator hero video at 10 to 12 percent real ER — is reproducible and stays the format anchor.

Conversion

Instrument the sales feedback loop in Q4: weekly demo attribution tagged to what content shipped that week. Until this loop is live we cannot claim a conversion number honestly.

CURRENTLY FLAGGED

Not measured. Q4 workstream with Wahid + sales team.

Sentiment

Track comments, DMs and organic UGC volume. First real evidence UGC has emerged: **@the.iv.pharmacist** posted "POV you're back at the Titan pharmacy" tagging Titan, 897 views on day one. Spontaneous customer content is the sentiment signal that matters.

Goal	Business objective	Metric	Q4 target
Awareness	Help pharmacies find us	Total reach, follower growth	+40% reach YoY; 7,500 LI followers by Q1'27
Engagement	Convince pharmacies to choose us	Real ER (corrected), reach per post	Median ER to 9%; reach per post 854 → 1,100
Conversion	Sell software	Demo bookings tagged to content	Loop live end of Oct; baseline set Nov
Sentiment	Earn advocacy + loyalty	Comments, DMs, UGC volume	Baseline set Q4; grow Q1'27

03

Target audience

Four personas carried forward from the 2025 segmentation, rewritten with 2026 nuance.

01 · The Pharmacy Owner

Independent operator · multi-site group · family business · 11,500 UK pharmacies

WHO THEY ARE

Independent owner or multi-site operator. Family businesses, second-generation operators, first-time acquirers. They open Sundays. They stayed open in the pandemic.

HOW THEY CONSUME

LinkedIn 10–15 min/day, on mobile, on the sofa in the evening. Sector newsletters at breakfast (P3, C+D, CPCS). WhatsApp groups for real trade. YouTube for the 20-minute story.

WHAT THEY WANT

Other pharmacy owners on camera telling them how they did the thing. Real numbers. Real mistakes. Real workflow.

WHAT THEY CARE ABOUT (IN ORDER)

Cash flow this month. Their team not burning out. Getting the workflow off paper. Doing more clinical work without hiring more people. What sector news means for their business.

WHAT THEY WILL NOT TOLERATE

Feature demos. "Book a demo today." Polished vendor marketing. They smell it in the first line.

HOW TITAN HELPS

Named-operator case studies. Advocacy on the issues they care about. A voice on their side of the trade.

02 · The Pharmacist

Employed pharmacist · locum · dispensing pharmacist · lives in the software every day

WHO THEY ARE

Employed, locum or dispensing pharmacists. They do not usually pick the PMR but they live in it every day and they have loud opinions.

WHAT THEY CARE ABOUT

Usability. Speed. Fewer clicks. More time with patients, less time troubleshooting the software. Not being blamed when it breaks.

HOW THEY CONSUME

LinkedIn during dispensing quiet periods. Sector newsletters. YouTube for CPD. TikTok increasingly for peer content.

WHAT THEY WILL NOT TOLERATE

Anything that sounds like management propaganda.

WHAT THEY WANT

Honest talk about workflow. Peer voices they trust. Content that acknowledges the day-to-day reality.

HOW TITAN HELPS

Cultural posts, community content, technician spotlights, workflow storytelling. The Weekly Rhythm's Friday Personality slot is the pharmacist slot.

03 · The Dispenser / Counter Staff

Runs the counter, MDS trays, CD register · often longest-serving · rarely on LinkedIn

WHO THEY ARE

The people running the counter, the MDS trays, the CD register. Often longest-serving in the building.

WHAT THEY CARE ABOUT

Reliable tools. Not being interrupted by software that does not work. Being able to help patients quickly.

HOW THEY CONSUME

TikTok, Instagram Reels, Facebook (older cohort). Word of mouth in the shop. Rarely LinkedIn.

WHY THEY MATTER TO THE STRATEGY

They are the reason TikTok's ~40% reach share matters. The Persona 3 audience does not read Titan's LinkedIn feed.

WHAT THEY WANT

Peer content that shows work in the shop. Humour. Recognition. Formats that reward personality.

HOW TITAN HELPS

UGC content and short-form video that features them. The @the.iv.pharmacist wave is the format that reaches this audience. Not a LinkedIn play.

04 · Industry Leader

NHS · pharmacy bodies (RPS, NPA, PDA) · sector press · healthcare tech investors

WHO THEY ARE

NHS decision-makers, pharmacy body figures, sector journalists, healthcare tech investors. Small numerical audience, disproportionate downstream influence on adoption and policy.

HOW THEY CONSUME

LinkedIn heavily. Long-form written pieces. Podcasts. Sector conferences.

WHAT THEY WANT

Named authority. Real analysis. Contrarian-but-defensible takes on where the sector is heading.

WHAT THEY CARE ABOUT

The direction of pharmacy. Where the money is flowing. Which operators are worth backing. Whether the sector is moving fast enough on services and AI.

WHY THEY MATTER TO THE STRATEGY

They are the compounding audience. A single share from a well-followed sector figure moves numbers we cannot replicate through paid.

HOW TITAN HELPS

Hooman-led thought-leadership drumbeat. Sector-thesis carousels. Advocacy-with-action posts. Named authority voices — Wahid on AI, Hooman on economics, Tariq on direction. The Wednesday Perspective slot is the industry-leader slot.

04

Competitive analysis

Six UK PMR vendors reviewed in the last month. The pattern is stark.

Vendors are asleep. The gap is ours.

Vendor	Followers	30d trend	What they do	The gap
PharmacyX	2,151	+361%	Founder-led, "only vendor that runs pharmacies", feature-first framing, book-a-demo closers. Zero comments per month.	No editorial voice, no comment community, no advocacy
Cegedim Rx	7,693	-81.9%	Largest by followers, posting less than once a week. Corporate reposts.	Market laggard. Territory to take.
Positive Solutions	2,850	Static	"Still relying on manual dispensing processes?" over selfies. Feature-first, low-effort.	No editorial spine
RxWeb	719	Growing slowly	Named-operator carousels ("Meet Nelly, 18 years with RxWeb"). Best-hooked caption in the set. No video.	The one to watch
Apotec	841	Migration push	"Switch PMR. Rest easy." Time-limited free-migration hook.	Feature-frame in disguise
HxCare	Small	Event-only	"Care Show London tomorrow, Stand C15."	No ongoing story

Cross-set patterns

- Every vendor opens captions with vendor-announcement openers ("Our partnership with X", "We're delighted to")
- Zero advocacy content across the whole set — nobody positions on the pharmacist's side
- Only Titan does video-first customer stories at any scale
- No direct-speech customer quotes anywhere except RxWeb (whose "customer" is on payroll)

Titan SWOT

	Positive	Negative
Internal	Named-operator video engine at scale · advocacy voice · editorial standards · brand system · subagent + Studio OS infrastructure	Manual last mile · video edit throughput · single-crew dependency · previously unmeasured video retention
External	Cegedim in freefall · PharmacyX has no editorial spine · sector conversation open on AI + hub-and-spoke · UGC emerging spontaneously	LinkedIn algorithmic reach compression across all B2B pages · TikTok algorithmic volatility · ongoing platform dependency risk

The four gaps we own or can take

1. **Advocacy-with-action.** Zero competition. Our EPS petition drove 597 clicks.
2. **Video-first customer stories.** Only moving-image content in the entire set. Compounding advantage.
3. **The comment section.** PharmacyX earns zero comments/month. We earn 28.
4. **The owner-operator podcast lane.** Nobody doing *by/for* individual owners. (Podcast is a separate document.)

05

Social media audit

Corrected numbers. Three-year story. The dilution finding. The hook finding.

The three-year story

+45.6%Follower growth Jan–
Aug '24 → '25**+71.6%**Impressions in the
same window**+410%**Post engagement rate
uplift ('24 → '25)**+49.2%**

Page reach ('24 → '25)

2024 baseline

3,370 followers. 5.28% post ER (as reported). 112,145 impressions Jan–Aug. The platform was working, the pattern was not yet formed.

2025 breakout

Named-operator case studies landed. The 1,000th pharmacy multi-image. Priory Pharmacy hero (Prabjautd) at 6,727 impressions and 105 reactions. The engine started running.

2026 consolidation

6,128 followers. Median 17 reactions per post, median 854 impressions per post, median real ER 6.87 percent. Per-post reach down 33 percent YoY while total volume rose 25 percent. The story is not decline. It is **dilution**. We are shipping more posts and each one reaches fewer people, while total engagement holds roughly flat. This is a leverage problem, not a talent problem.

DATA INTEGRITY — ENGAGEMENT RATE MAPPING BUG

The engagement_rate field in titan-linkedln.json was mapped incorrectly against the raw LinkedIn export, understating real ER by roughly a third. Real Titan median ER is 6.5 to 11 percent depending on window and format, not the 1 to 2 percent the old dashboard suggested. Fix in flight. Every metric in this document uses the corrected number.

Practical consequence: decisions we came close to making on the wrong data — for example, "our engagement is bad, we need a rebuild" — do not apply. The engagement is good. The problem is elsewhere.

Three findings that **reshape the year**

Finding 1 · Platform reach ranking (corrected, Q3 2026)

Platform	Share of total reach	Persona anchor	Read
LinkedIn	~45%	Owner + Industry Leader	Primary channel. Named-operator engine lives here.
TikTok	~40%	Pharmacist + Dispenser	Larger than assumed. Under-invested. Promote to primary.
Instagram	~10%	Owner + Pharmacist	Secondary. Keep Reels light.
Facebook	~5%	Older Dispenser	Reels averaging 36 views/post. Kill candidate.

Finding 2 · Video dilution

Of 164 videos shipped in the last 12 months, **79 (48%) performed at or below the noise floor** for their platform. Killing that bottom half lifts the video median reach by 27% at zero production cost. The single largest free lever in the operation.

Below-par videos cluster in identifiable types:

- Generic "Titan is amazing" cutdowns
- Pre-event branded countdown videos
- Feature-explainer cutdowns without a named human
- Facebook Reels in general
- Third-plus cuts of any single case study (intra-story decay)

Finding 3 · Hook shape

Cross-checked 136 recent posts. 18 used a question-opener hook. Those 18 averaged **1.63x the reach** of statement-opener posts on LinkedIn specifically. Uplift is smaller on TikTok (native content patterns differ) and effectively noise on Facebook.

PRACTICAL CONSEQUENCE

Question-opener becomes the house default on LinkedIn caption openers. Statement openers require an editorial reason.

Finding 4 · Cross-platform correlation of same asset

Winners do not travel. A named-operator hero that lands at 11% ER on LinkedIn regularly lands at floor-level engagement on TikTok, and vice versa. This kills the "shoot once, post everywhere" mental model and replaces it with **"shoot twice, repurpose deliberately"**.

06

The Content Operating System

Seven stages. Named owners. Leverage claims. This is the leap.

The pipeline in one line

Intake → Classify → Draft → Publish → Measure → Extend → Review.

Seven stages. Each has an owner, a tool, and a leverage claim. Every piece of content flows through it. Every budget ask in this proposal maps back to a specific stage.

FRAME

This is an **operating leverage** story, not a content plan. Each stage has an "hours saved" or "throughput multiplier" claim. That is the argument for the budget ask.

Stages 1 to 4 · Input to output

STAGE 01

Intake

OWNER Cam · Intake Curator subagent **TOOL** Studio OS intake portal

Every piece of raw content enters one funnel. Three sources: Studio OS portal (Nas + on-site staff upload directly), Cam-run shoots (case studies, events, thought leadership), UGC watch (spontaneous customer content).

Studio OS intake portal shipped this weekend. Ashley Matthews' Baxenden batch went through as `cms squpnx000004l7w7zv7uag` — Monday's post. Live proof of the "no-crew capture → publishable content" mechanic.

Leverage: removes 4 to 6 hours/week of "chase the implementer for context" work. UGC watch catches things Cam would not otherwise see.

STAGE 02

Classify

OWNER Intake Curator proposes · Cam confirms **TOOL** Studio OS taxonomy · Notion pipeline

Every intake gets tagged three ways: production tier (hero / campaign / stocking filler / evergreen), shape (video / multi-image / carousel / quote card), protagonist (named operator / Hooman / cultural / advocacy).

Leverage: kills the "should I even use this?" decision loop. Portal batches with weak input downgraded automatically. Cam is confirmer, not classifier.

STAGE 03

Draft

OWNER Comms Agent v1 · Cam approves **TOOL** Claude platform · Cam-voice prompt system

Captions, campaign shapes, sequence planning, evergreen extension briefs — all drafted in Cam's voice by the Comms Agent, following the editorial frameworks.

Idea-First Editorial: customer is the proof, not the premise. Open with the sharpest thing the customer said. Attribute properly. Frame what it proves. No vendor-announcement openers.

Fast Company protagonist hierarchy: kicker + headline + deck + ironic-reversal deck sentence. Name the person in the headline only when the name carries recognition weight.

Leverage: Comms Agent takes 60–80% of caption-writing off Cam. Cam still writes anything sector-sensitive, anything hero, anything for Hooman.

STAGE 04

Publish

OWNER Cam (approval) · Notion (scheduling) **TOOL** Notion Social + LinkedIn API (from Oct)

Cam-approved, scheduled via Notion Social directly to LinkedIn / TikTok / Instagram / Facebook Reels (until FB is killed). LinkedIn API integration shipping end of Oct removes Metricool dependency.

Leverage: publish is not a bottleneck. Keeping it simple keeps it that way.

Stages 5 to 7 · Feedback loop

STAGE 05

Measure

OWNER Cam (monthly digest) · Wahid (quarterly review) **TOOL** LinkedIn API · Studio OS metrics pipeline

Every post scored on the real metric set: real ER, reach per post, dilution index (share of below-par posts in last 30 days), hook compliance (share of LinkedIn posts using question-openers), hero extension count, UGC volume.

Leverage: fixes the mapping bug. Gives Wahid the same numbers Cam sees. Ends "which dashboard is right?". The dilution index turns instinct into monthly discipline.

STAGE 06

Extend

OWNER Comms Agent proposes · Cam approves + briefs producer

TOOL Interview transcript library · republishing calendar

Every hero shoot produces bank material. Extend systematically republishes: unused interview footage from Asif (Safys), Akbar (Drayton Prime), Malia, Pritee (full transcripts in `_interviews-raw/titan/case-studies/raw/`), plus evergreen quote drops 3–6 months after original hero (Prabjau at 183 days landed 2,573 imp / 49 rx — highest-leverage low-effort slot on the page).

Leverage: four hero campaigns already paid for, sitting unshipped. Ships four campaigns Q4 with zero new shoot cost. The single biggest ROI move in the plan.

STAGE 07

Review

OWNER Cam authors · Wahid signs off next quarter **TOOL** Quarterly review template

Quarterly, quantified, Wahid-facing. Reads: what was the plan, what shipped, what worked, what did not, what the numbers say, what we are changing next quarter. Not a narrative — a quantified review with the same metric set each time.

Leverage: Wahid gets a real review cycle instead of a monthly update he does not have time to read. Decisions get made at cadence with data on the table.

The subagent stack — rollout order

#	Agent	When	Job
01	Comms Agent	Q4 2026	Captions, campaign shapes, evergreen extension proposals in Cam's voice
02	Intake Curator	Q4 2026	Classify portal batches, watch for UGC, downgrade weak intakes
03	Content Ops	Q1 2027	Production tracking, deadlines, delivery hand-offs
04	Delivery	Q1 2027	Client-facing status updates, publish confirmations
05	Finance	Q1 2027	Retainer allocation, spend tracking against plan
06	Studio OS Curator	Q1–Q2 2027	Richer intake triage as portal volume grows

Each agent has a spec doc, is versioned, and gets its own quarterly review. Cam owns the voice fidelity check.

07

Content strategy · pillars & rhythm

Proof · Possibility · Leadership. Mon · Wed · Fri. Shoot twice, repurpose relentlessly.

The positioning triad

Proof

Titan PMR · named-operator case studies · concrete before/after · **Monday**

Possibility

Titanverse · future-of-services · clinical model shift · **Wednesday**

Leadership

Sector commentary · advocacy · Hooman · Tariq · **Friday + reactive**

The Hybrid Pharmacy narrative

Titan PMR frees the pharmacist's time. Titanverse makes that time valuable. Together they define the Hybrid Pharmacy — calm dispensing meets clinical and commercial freedom. Every pillar post lives inside this narrative.

The Weekly Rhythm

Monday = Proof · Wednesday = Perspective · Friday = Personality.

Same three-beat every week. Audiences feel the rhythm even when they do not consciously notice it. Reactive posts and event windows override but do not replace.

Monthly production model — shoot twice, repurpose relentlessly

- **Shoot twice** — one Titan PMR case study, one Titanverse case study, per month. Same crew day if geographically possible.
- **Repurpose relentlessly** — each shoot produces: 1 hero video · 1 multi-image visit post · 1 pull-quote card · 1 carousel to YouTube · 1 long-form YouTube · plus bank material for 1 evergreen quote drop 3–6 months later.
- **Layer evergreen** — Hooman thought-leadership, sector-thesis carousels, advocacy-with-action, cultural moments.
- **Fill with reactive** — sector news commentary within 48 hours of breaking.

Pillars concretely mapped

Pillar	Format anchor	Cadence	Evidence
Named-operator hero (Proof)	Video primary, multi-image secondary	2–3 arcs/month	Prabjautd 6,727 imp / 105 rx · Yusuf 3,807 / 85 · Sagar 5,356 / 56
Hooman drumbeat (Leadership)	Video, carousel, quote-card mix	4 posts/month	Highest engagement on named-authority posts historically
Event saturation	Multi-image + video	Heavy fortnight per event	Pharmacy Show '25 wrap 3,185 / 102 · TitanUp '26 wrap 1,987 / 66 / 4.13% ER
Advocacy-with-action (Leadership)	Single image or carousel with petition link	1/month minimum	EPS petition 597 clicks — top single-link post ever
Multi-image anchored moments (Proof)	Multi-image	2/month	Best format on page by real ER (23% avg across 12 examples)

EXPLICITLY EXCLUDED FROM THIS DOCUMENT

Podcast strategy — handled separately by Cam. Placeholder here to acknowledge it belongs in the same operating system, but the podcast plan is its own companion document.

08

Resources, roadmap, measurement

The tools, the 90-day plan, the numbers Wahid gets each month.

What the OS runs on

Notion editorial board

220+ post pipeline, integrated with Notion Social for direct scheduling. Single source of truth for what is drafted, approved, published.

TITAN repository

Central git repo. Every strategy doc, campaign plan, context file, metric snapshot. Versioned, searchable, portable.

Studio OS

Intake portal (live from this weekend), agent infrastructure, subagent stack spec docs, metrics pipeline, LinkedIn API integration (Oct).

Design bible

TITAN/_context/design/. Master Brand Brief, Titan PMR Design Notes, Light Social Post System, CSS tokens. Every visual renders from these.

Interview footage library

TITAN/_interviews-raw/titan/case-studies/raw/. 25+ full interviews already captured. Asif, Akbar, Malia, Pritee sitting unpublished today. Extend stage raw material.

Sales attribution loop

Not yet built. Q4 workstream with Wahid.

August to November 2026

August (weeks 3–4)

- Ship this proposal to Wahid (**Cam**, 17 Aug)
- Wahid decisions on editor budget, kit, agent infra, FB kill (**Wahid**, end Aug)
- Baxenden portal-intake post published (already scheduled Mon 18 Aug — proves the portal)
- Comms Agent v1 spec finalised (**Cam**)
- Engagement rate mapping bug fix shipped (**Cam** + Wahid dev time)

September

- Comms Agent v1 in production, drafting 50%+ of standard captions (**Cam**)
- Intake Curator subagent v1 shipped (**Cam**)
- Kill list published: below-par video types, Facebook Reels, third-plus cuts (**Cam**)
- Question-opener hook standard applied to all LinkedIn captions (**Cam** + **Comms Agent**)
- First extended-hero campaign shipped from unused footage — Asif or Akbar (**Cam** + **producer**)
- LinkedIn API integration development starts (**Wahid dev capacity**)
- Creative producer hired, onboarded (**Cam** + **Wahid**)

October

- Pharmacy Show 2026 — event saturation window, improved playbook applied (**Cam** + **producer**)
- Second extended-hero campaign (**Cam** + **producer**)
- LinkedIn API integration shipped (**Wahid dev**)
- Sales attribution loop live (**Wahid** + **sales**)
- TikTok promoted to primary channel with native-content brief (**Cam**)
- Content Ops subagent v1 shipped (**Cam**)

November

- Q4 quantified review published (**Cam** authors, **Wahid** reads)
- Q1 2027 direction set (**Wahid**)
- Third and fourth extended-hero campaigns (**Cam** + **producer**)
- Podcast launches (separate document; noted here for calendar awareness)

Per-platform decisions

Platform	Continue	Stop	Start
LinkedIn Primary · ~45%	Named-operator hero videos · multi-image anchored moments · Hooman drumbeat · advocacy-with-action · event saturation	Below-par video types (feature-explainer cutdowns, generic branded countdowns, 3rd+ case-study cuts) · statement-opener captions on standard posts · blog-teaser reposts within a month · vendor-announcement openers	Question-opener as caption default · Fast Company protagonist hierarchy on every hero · systematic hero extension from interview library · real-ER reporting in monthly digest
TikTok ~40% · promote to primary	Short-form named-operator cutdowns · cultural + personality-heavy content	Treating TikTok as a LinkedIn dumping ground — winners do not travel, so the LinkedIn-cutdown-reposted-on-TikTok flow stops	Native TikTok content briefs · own follower baseline + cadence · trend-aware content within brand guardrails · lean into the @the.iv.pharmacist wave when format fits
Instagram ~10% · secondary	Reels lightly (1–2/ week) from the same shoot batches	Producing IG-specific content that duplicates TikTok effort	Question-opener hooks on Reel captions · photo dumps from shoot days as multi-image (best-performing IG format)
Facebook ~5% · kill candidate	Nothing	Facebook Reels entirely. 36 views/post at 15/month is not worth the overhead. Wahid sign-off requested.	Nothing on Facebook. Reallocate the production hours to TikTok native.

The corrected metric set

Six numbers monthly. Two more once instrumented. One quarterly review. Same set every time — so the trend line is real.

Monthly digest — from Day 1

Metric	Owner	Notes
Real engagement rate (median, per platform)	Cam	Corrected number, not pre-bug dashboard
Reach per post (median, per platform)	Cam	The dilution signal
Dilution index (% below-par posts, 30d window)	Cam	Aim: below 30% by end of Q4
Hook compliance (% LinkedIn posts with question-opener)	Cam	Aim: above 60% by end of Q4
Hero extension count (arcs republished from library)	Cam + producer	Aim: 1/month baseline
UGC volume (tagged posts per month)	Intake Curator subagent	Baseline being set this quarter

Monthly digest — once instrumented

Metric	Owner	Notes
Demo bookings tagged to content (weekly)	Sales team + Wahid	Requires Q4 loop build
Sector-thesis share (share count on carousels)	Cam	Advocacy signal

Quarterly review

Full read against goals in Section 2 · decision on Q+1 direction · kill-list update · new-start list · production capacity check.

What Wahid decides on the day

Six things need Wahid sign-off for the operating system to run at full leverage.

01 Editor / creative producer budget. Part-time or contractor, 2–3 days/week from September. Range TBD with Cam. Highest single-ROI resource in the plan.

02 Studio kit reset. Lighting + audio kit for Studio OS intake shoots. Portal will only be as good as the raw material coming in. Range TBD with Cam.

03 Facebook kill sign-off. Stop producing FB Reels effective September. Reallocate hours to TikTok native.

04 Agent infrastructure sign-off. Ongoing Claude platform + subagent stack build. Comms Agent, Intake Curator, then Content Ops / Delivery / Finance through Q1 2027. Range TBD with Cam.

05 Podcast separate document timing. When does Cam get sign-off to ship the podcast plan as its own proposal? Cam wants to hand it over as a companion document by end of August.

06 Board's role in amplification. Founder-led distribution test in v2 Q4 strategy proposed. Hooman reposts one hero per week. Extension: Wahid, Tariq, Sajid personal-profile amplification cadence, if any. Low-cost lever, material reach implications.

EVIDENCE GAPS FLAGGED IN THE MD SOURCE · RED-PEN PASS TOMORROW
